EREMIT is a registered trademark in Germany.

This specification is applied to describe the related battery product in this Specification and the battery/cell supplied by EREMIT.

All cells within this pack are originally produced by Bixell Technology limited. For further informations related to this product please contact us first.

Page 1: Main information
Page 2-3: Cell Characteristics
Page 4: Protection board Data

Page 5: Charge/Discharge notes; Cell Parts

Page 6: Cell Handling Page 7: Warranty

Number	Description	Ratings	Remarks
1;	Nominal Capacity	6000mAh	At 0,2C CC discharge
2;	Minimal capacity	>6000mAh	
3;	Nominal Voltage	6.4V	
4;	Delivery voltage	6.2 V	On delivery
5;	Charge voltage	7.3V	
6;	Standart Charging	0.2C Standart	6 hour nominal
		1C max.	1.5 hour rapid
7;	Standart discharging	1C CC to 4.0V	
		2C max.	

8;	Pack internal impedance	≤70mOhm	Measured at 1khz after	
			50%	
			Charge	
9;	Operating temperature	0-45°C	Maximum -10° - 60°C	
		Recommended	10 - 34°C /	
			Do not charge below 0°C	
10;	Internal Chemical	IFR	Lithium-Iron-Phosphate	
	charact.		_	

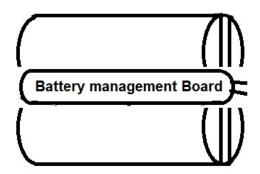

## 10; Long time storage (-5°C – 30°C)

If the battery need be stored for a long time, the voltage should be 6.6V, and stored in the condition as storage proposal. It need at least one charge & discharge cycle every year.

Maximum sizes: 33 x 66 x 73 mm Maximum weight: 0.3 kilogram

# **Battery Characteristics**

Number	Description	Ratings	Remarks
1;	Standart	Charging cell initially with constant	
	Charge	current at 0.2C to 7.3V, then with	
		constant voltage at 7.3V till charge	
		current is below 0.02C	
2;	Rated	Capacity means the discharge capacity	6000mAh
	capacity	of the cell, which is measured with	
		discharge current of 0.2C with 4.5V	
		cut-off voltage after standard charge.	
3;	Cycle life	Test condition:	>2000
		Carge 1C to 7.3V -> discharge 1C to	
		4.0V	
		80% or more of 1st cycle capacity at	
		0.5C discharge of operation	
4;	Self	After standart charging stored 1 month	Above 98%
	discharge	under storage condition descriped in	residual capacity
		page 2; then measured the capacity with	
		0.2C till 4.5V	

# **Protection circuit Data**

Item	Symbol	Content	Criterion	
Over change Dust estion	$V_{\text{DET1}}$	Over charge detection voltage	3.75±0.05V	
Over charge Protection	tV <sub>DET1</sub>	Over charge detection delay time	0.015 ~ 0.14s	
	$V_{REL1}$	Over charge release voltage	3.60±0.05V	
Over discharge	$V_{\mathrm{DET2}}$	Over discharge detection voltage	2.0±0.1V	
protection	tV <sub>DET2</sub>	Over discharge detection delay time	95 ~ 173ms	
	$V_{REL2}$	Over discharge release voltage	2.5±0.10V	
	$V_{ m DET3}$	Over current detection voltage	N/A	
Over current protection	$I_{DP}$	Over current detection current	12~15A	
	tV <sub>DET3</sub>	Detection delay time	0.1~50S	
		Release condition	Cut load	
G1		Detection condition	Exterior short circuit	
Short protection	T <sub>SHORT</sub>	Detection delay time	50μs	
		Release condition	Cut short circuit	
Interior resistance	$R_{\mathrm{DS}}$	Main loop electrify resistance	$V_C=3.8V$ ; $R_{DS}\leq45m\Omega$	
Current consumption	$I_{DD}$	Current consume in normal operation for full board	16µА Туре 30µА Мах	

4x 8205A Mosfet

#### Over-Discharge

Short time over discharge does not affect the battery function, but long time over discharges can damage battery performance, and can't use any more. due to its own self-discharge characteristics also lead to over-discharge, to prevent over-discharge occurs, the battery should maintain the certain electric quantity, the cell shall be charged periodically to maintain between 3.0V and 3.65V – in total the pack shall be charged to between 6.0V and 7.3V. Over-discharging may causes loss of cell performance, characteristics, or battery functions.

The electrical products shall be equipped with a device to prevent further discharging exceeding a cut-off voyage specified in the Product Specification.

If Cells below 2.0V

The cell battery pack shall start with a low current (0.02C) for 30 - 45minutes, i.e. pre-charging, before rapid charging starts. The rapid charging shall be started after the (individual) cell voltage has been reached above 2.5V (5V in total) within 30 - 45 minutes that can be determined with the use of an appropriate timer for pre-charging. In case the (individual) cell voltage does not rise to 2.5V (5V in total) within the pre-charging time, then the charger shall have functions to stop further charging and display the cell/pack is at abnormal state.

#### Charging

Charging current: Do not surpass the largest charging current that specification stipulated.

Charging voltage: Do not surpass the highest limited voltage that specification stipulated.

Charging temperature: within temperature scope that specification stipulated.

Charge with constant current, then with the constant voltage, no reverse charge, which is dangerous

No.	Part Name	Description	Q'ty	Remark
1	Cell/Pack	LiFePo4-6.4V-6000mAh	1	
2	Patterns Tape	Shrink tube, Cardboard Isolation	1	
3	PCM	KH-47A2S-D (4x 8205A)	1	
4	Wire	AWG22	2	

### 12. Handling of Cells

#### 12. Warning and cautions in handling the lithium cell

To prevent the possibility of the cell from leaking, heating, explosion, please observe the following precautions:

- 1. ¬ Don't immerse the cell in water.
- 2. ¬ Don't use and leave the cell near a heat source, such as fire or heater.
- 3. ¬ Don't reverse the positive and negative terminals.
- 4. ¬ Don't connect the cell to an electrical outlet directly.
- 5. ¬ Don't discard the cell in fire or heater.
- 6. ¬ Don't connect the positive and negative terminal directly with metal objects.
- 7. ¬ Don't transport and store the cell together with metal objects such as necklaces, hairpins.
- 8. ¬ Don't strike, throw or trample the cell.
- 9. ¬ Don't directly solder the cell.
- 10. ¬ Don't pierce the cell with a nail or other sharp object.

#### ¬ Caution

- ¬ If the cell leaks and the electrolyte get into your eyes, don't wipe eyes, instead, thoroughly rinse the eyes with clean running water for at least 15 minutes, and immediately seek medical attention.

  Otherwise, eye injury can result.
- ¬ If the cell gives off an odor, generates heat, becomes discolored or deformed, or in any way appears
  - abnormal during usage, recharging or storage, immediately remove it from the device or cell charger and stop using it.

## **Period of Warranty**

The period of warranty is 2 year from the date of shipment. Replacement is guaranteed within warranty if battery with defects proven due to manufacturing process instead of the customer's abuse and misuse.

For further warranty regulations please check country-specific regulations made by eremit.
